By Authority of Victorian Government Printer

Domestic Animals Act 1994

STANDARD FOR RESTRICTED BREED DOGS IN VICTORIA

I, Peter Walsh, Minister for Agriculture and Food Security:

- a) revoke under section 3(3) and section 3(4) of the **Domestic Animals Act 1994** the 'Standard for Restricted Breed Dogs in Victoria' approved by the Minister on 31 August 2011 and published in the Victoria Government Gazette No. S283 on 1 September 2011; and
- b) approve under section 3(3) and section 3(4) of the **Domestic Animals Act 1994** the following 'Standard for Restricted Breed Dogs in Victoria'.

Dated 31 January 2014

PETER WALSH
Minister for Agriculture and Food Security

SPECIAL

**STANDARD FOR
RESTRICTED BREED DOGS IN VICTORIA**

This is the approved standard for the purposes of section 3(3) of the **Domestic Animals Act 1994**.

Pursuant to section 3(1) of the **Domestic Animals Act 1994** a restricted breed dog (RBD) is a dog that is any one of the following breeds – American Pit Bull Terrier (or Pit Bull Terrier), Dogo Argentino, Fila Brasileiro, Japanese Tosa, Perro de Presa Canario (or Presa Canario).

Under section 3(3) of the **Domestic Animals Act 1994** a dog that falls within this approved standard for a breed of dog specified above is to be taken to be a dog of that breed.

Note: Whilst this standard is based on a fully mature dog, it would be expected that an individual American Pit Bull Terrier would reach the prescribed height and overall balance desired by the age of approximately 9 months, however body maturity and strength would not be achieved until much later – maybe two to three years plus. If possible the bitch and sire should be evaluated when considering the possibility of the puppies meeting this standard.

PART 1 – AMERICAN PIT BULL TERRIER

This part provides a regime that must be followed before an authorised officer may make a declaration to the effect that a dog is a restricted breed dog because it falls within this standard as of the American Pit Bull Terrier breed. The first step is to determine whether the dog is exempt under any of the Categories of Exemption below:

Categories of Exemption

Categories of Exemption

- Dogs in respect of which the owner has one of the following certificates stating that the dog is an American Staffordshire Terrier –
 - a pedigree certificate from the Australian National Kennel Council;
 - a pedigree certificate from a member body of the Australian National Kennel Council;
 - a pedigree certificate from a national breed council registered with the Australian National Kennel Council; or
 - a certificate signed by a veterinary practitioner.
- Blue eyes.
- The colour of the coat is blue merle or pure white.
- Tail curled over the back.

If the dog meets at least one of the **Categories of Exemption** in this part, the dog does not fall within the standard as of the American Pit Bull Terrier breed.

Alternatively, if the dog does not meet at least one the **Categories of Exemption** in this part, the next step is to determine whether the dog meets the following Cumulative Requirements:

Cumulative Requirements

- not less than 3 of the **Conformation Criteria**; and
- not less than 10 of the **Physical Characteristics Criteria**; and
- not less than 10 of the **Supplementary Physical Characteristics Criteria**.

If the **Cumulative Requirements** in this part are not met, then a dog cannot be declared to be an American Pit Bull Terrier.

A dog that has none of the stated **Categories of Exemption** in this part and meets the **Cumulative Requirements** in this part is a dog that falls within this approved standard as of the American Pit Bull Terrier breed.

Conformation Criteria

Conformation Criteria (refer to figure 1)

- Height at withers from the ground for bitches and dogs is 43 centimetres – 53 centimetres.
- Weight for bitches and dogs is 14 kilograms – 36 kilograms.
- Muzzle is slightly shorter in length to the skull, being a 2:3 ratio of muzzle to skull.
- The overall outline of the breed indicates it to be slightly longer in length (point of shoulder to buttocks) than height (withers to ground). Bitches may be slightly longer than males.
- The distance from withers to the elbow and the elbow to the ground is generally equal.

Figure 1

Physical Characteristics Criteria and General Appearance

General Appearance

The dog's general appearance is a medium sized dog that is strongly built with well defined muscles. This breed is noted for its climbing ability and subsequent strength in its hindquarters.

Physical Characteristics Criteria

Head

- The head is proportionate to the dog (refer to figure 2).
- The general shape of the head is that of a blunt wedge, large and broad (refer to figure 3).
- The skull and muzzle are on parallel plains separated by a moderately deep stop (refer to figure 4).
- The skull is large, fairly flat, broad and deep, slightly tapering towards the stop (refer to figure 4).
- Muzzle is broad, deep and powerful with a slight taper to the nose and falls away slightly under the eyes (refer to figure 5).
- There is a deep median furrow reducing in depth from stop to occiput (refer to figure 6).
- Cheek muscles are prominent but free of wrinkles (refer to figure 6).
- When the dog is alerted wrinkles will form on the forehead (refer to figure 6).
- Lips are clean and tight (refer to figure 6).
- Teeth are large and a complete scissor bite ie. upper teeth closely overlapping the lower teeth and set square to the jaws (refer to figure 7).
- Ears are set high on the skull, not large and half pricked or rose shaped (ie folding backwards exposing the inner burr of the ear). (refer to figure 8).

Figure 2

Figure 3

Figure 4

Figure 5

Figure 6

Figure 7

Figure 8

Physical Characteristics Criteria**Neck**

- The neck is moderate length and with great strength, tapering from the head into the shoulders (refer to figure 9).
- The neck must be free from loose skin or dewlap (loose, pendulous skin under the throat).

Figure 9**Physical Characteristics Criteria****Forequarters, hindquarters, tail and coat**

- Forequarters of the dog have strong forelegs, well boned and muscular with elbows fitting close to the body (refer to figure 10).
- The hindquarters are strong and muscular and are in balance with the forequarters. Thighs are well developed and muscular (refer to figure 11).
- The tail is set in line with the back and tapers to a point (refer to figure 11).
- The length of the tail should reach approximately to the hock joint (refer to figure 12).
- The coat is short, smooth, glossy and of a harsh texture, free of undercoat.

Figure 10

Figure 11

Figure 12

Supplementary Physical Characteristics Criteria**Supplementary Physical Characteristics Criteria**

- Nose is large with wide open nostrils and may be of any colour (refer to figure 13).
- Eyes are medium in size, round in shape and set low in the head – not prominent.
- Neck has a slight arch over the crest (refer to figures 1 and 2).
- The forelegs are set moderately well apart and in a straight line to the ground (refer to figure 14).
- The legs are straight with some flexibility in the pasterns (refer to figure 14).
- The body has a deep chest of moderate width (refer to figure 14).
- The pasterns short and fairly straight but with flexibility (refer to figure 15).
- The forechest should not extend far beyond the point of shoulder or below the elbow (refer to figure 16).
- The dog is well ribbed back with moderate tuck up (concave underline of the body curving upwards from end of the ribs to waist).
- The back is broad, strong, firm and level and with a slight incline at the withers (refer to figure 17).
- The loin is short and deep with a slight slope to the croup (refer to figure 17).
- The hock joint should be well bent and the rear pasterns close to the ground perpendicular and parallel to each other (refer to figure 18).
- The feet are round and in balance with the size of the dog, well arched and tight (refer to figure 19).
- The pads are hard and well cushioned.
- Nails are strong.
- At rest the tail is carried low and when excited may be carried raised.
- White feet and a splash of white on the chest on solid coloured dogs.
- The eye rims are the same colour as the skin colour.
- Arches over the eyes are well defined but not pronounced.

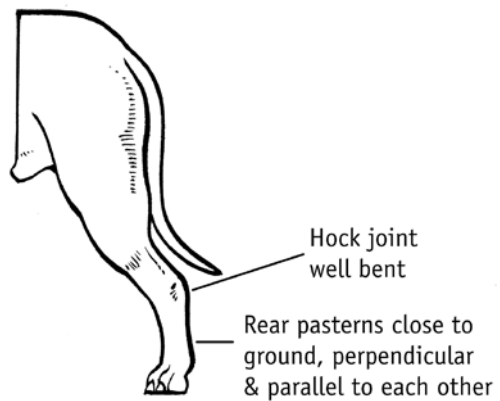

Figure 19

End of Part 1 – American pit bull terrier

PART 2 – DOGO ARGENTINO (Argentinean Mastiff)

A dog that meets the description of a dog in this Part is a Dogo Argentino.

GENERAL APPEARANCE AND CHARACTERISTICS

The Dogo Argentino is a large athletic dog that has powerful muscles which stand out under the consistent and elastic skin.

The height at the withers is equal to the height at the croup.

The depth of the thorax is half of the measurement of the height at the withers.

The length of the body is slightly longer than the height at the withers.

HEAD

The head looks strong and powerful, without abrupt angles or distinct chiselling. Its profile shows an upper line which is: convex at the skull (because of the prominence of its masticatory muscles) and nape; and slightly concave at the foreface.

The head joins the neck forming a strong muscular arch.

Skull: Compact, convex in the front to back and transverse direction. The occipital bone is not very prominent. The median furrow of the skull is slightly noticeable and the stop is slightly defined.

Muzzle: As long as the skull. The upper line is slightly concave.

Jaws/Teeth: Strong jaws with big teeth firmly implanted with a pincer bite, or scissor bite possible.

Nose: Large nostrils slightly elevated forwards, black pigmentation.

Lips: Moderately thick, short and tight with free edges.

Cheeks: Large and relatively flat.

Eyes: Dark or hazel coloured, almond-shaped.

Ears: Set high, broad, thick, flat and rounded at the tip and covered with smooth hair. Whilst ear cropping in Victoria is a prohibited procedure, a dog should not be ruled out of being an RBD if its ears are cropped as internationally it is common in this breed.

NECK

Medium length, strong and erect, well muscled, with a slightly convex upper line. It joins the head in a muscular arch.

FOREQUARTERS

As a whole, they form a sturdy and solid structure of bones and muscles. They are straight and vertical when seen from the front or in profile.

The pasterns are broad and in line with the forearm, the feet rounded; with short, sturdy, very tight toes.

BODY

The length of the body (from the point of the shoulder to the point of the buttock) exceeds the height at the withers.

Chest: Broad and deep. Tip of the breastbone level with the tip of the shoulder joint and the sternal line of the thorax is level with the elbow line.

Upper line: The withers and the pin bones of the croup are at the same height.

Back: Large and strong, with fully developed muscles forming a slight slope towards the loins.

Loins: Strong and hidden by the developed lumbar muscles which form a median furrow along the spine.

HINDQUARTERS

Strong, sturdy and parallel. The lower thigh is generally slightly shorter than the upper thigh.

TAIL

Set medium high, sabre-shaped, thick and long and reaching to the hocks.

COAT

Uniform, short, plain and smooth to the touch, with an average length of 1.5 to 2 cm. Variable density and thickness according to different climates and it may present an undercoat.

COLOUR

Completely white although there may be a black or dark coloured patch around the eye.

SIZE:

Height at the withers: 60 – 68 cm

End of Part 2 – Dogo Argentino

PART 3 – FILA BRASILEIRO (Brazilian Mastiff, Brazilian Guard Dog, Cao de Fila)

A dog that meets the description of a dog in this Part is a Fila Brasileiro.

GENERAL APPEARANCE AND CHARACTERISTICS

A large dog that is rectangular and compact in structure.

HEAD

The head is big and heavy but proportionate to the whole body. From a top view it resembles a trapezoid figure into which a pear shape is inserted.

Skull: A smooth curve from the stop to the occiput, which is well defined and especially protuberant in puppies.

Stop: From a front view it is practically non-existent. The median groove is slight. Seen from the side, the stop is only slightly pronounced.

Muzzle: The muzzle is slightly shorter than the skull.

Lips: The upper lip is thick and pendulous and overlaps the lower lip in a curve; the lower lip is tight and firm to the teeth and from there on it is loose.

Teeth: The teeth are wider than long, most likely a scissor bite but a level bite is possible.

Nose: Broad nostrils, black.

Eyes: Almond shaped, medium to deep set, generally dark brown to yellow, always in accordance to the colour of the coat. Individuals may present with drooping lower eyelids.

Ears: Pendant, large, thick, V-shaped. Broad at the base and tapering to the ends with rounded tips.

NECK

Strong and muscled giving the impression of a short neck. Slightly curved at the upper side and well detached from the skull. Dewlaps at the throat.

FOREQUARTERS

The length of the leg, from the ground to the elbow, is much shorter than from the ground to the withers.

Forearm: Limbs parallel with straight bones and slightly sloping pasterns.

BODY

Strong, broad and deep, and covered by thick loose skin. The thorax is longer than the abdomen.

Chest: Deep and broad chest reaching to the level of the elbows.

Back: Withers are set lower than the croup. After the withers, the upper line changes direction, ascending smoothly to the croup.

TAIL

Very wide at the root, medium set, tapering rapidly to reach the hocks.

LIMBS

Hindquarters: Less heavily boned than forelegs.

SKIN

Thick, loose skin over the whole body, chiefly at the neck forming pronounced dewlaps that can extend to the brisket and abdomen. Some individuals present a fold at the sides of the head, also at the withers running down to the shoulders.

FEET

Well arched toes not too close together. Back feet may be a little more oval than the forefeet.

COAT

Short, smooth, dense and close to the body.

COLOUR

Solid colours or brindles with a solid coat and dark stripes. A black mask may or may not be present, and there may be white marks on the feet, chest and tip of the tail.

SIZE AND WEIGHT:

Height at withers: 60 – 75 cm

Weight: Males: minimum 50 kgs Bitches: minimum 40 kgs

End of Part 3 – Fila Brasileiro

PART 4 – JAPANESE TOSA (Tosa Inu, Tosa Ken, Tosa Fighting Dog, Japanese Fighting Dog, Japanese Mastiff)

A dog that meets the description of a dog in this Part is a Japanese Tosa.

GENERAL APPEARANCE AND CHARACTERISTICS

Large-sized dog with hanging ears, short hair, a square muzzle and hanging tail thick at the root.

HEAD

Skull: Broad with an abrupt stop and long muzzle.

Teeth: Scissor bite.

Nose: Large and black.

Eyes: Small, generally dark brown in colour.

Ears: Small, rather thin, set high on the side of the skull and, hanging close to the cheeks.

NECK

Muscular, with a dewlap.

FOREQUARTERS

Forearm: straight, moderately long and strong.

Pastern: slightly inclining and robust.

BODY

Back: level and straight with a slightly arched croup

FEET

Tightly closed.

TAIL

Thick at the root, tapering towards the tip, reaching the hocks when let down.

COAT

Short, hard and dense.

COLOURS

Generally red, fawn, apricot, black, brindle. May have white markings on chest and feet.

HEIGHT

Height at withers varies females minimum height is 55 cm and males 60 cm.

End of Part 4 – Japanese Tosa

PART 5 – PERRO DE PRESA CANARIO (Presa Canario)

A dog that meets the description of a dog in this Part is a Perro De Presa Canario.

GENERAL APPEARANCE AND CHARACTERISTICS

The perro de presa canario is a large dog with a black mask. The body is longer than the height at the withers, with this characteristic being more noticeable in the female.

HEAD

Large and covered with supple, loose skin. The shape tends towards a slightly elongated cube.

Skull: skull-foreface proportion is 60-40%. The width of the skull is 3/5 of the total length of the head. The skull is slightly convex and the frontal bone tends to be flat. The width is almost identical to the length. There is a pronounced zygomatic arch.

Stop: the stop is pronounced and the furrow between the frontal lobes is well defined and is about two thirds the size of the skull.

Muzzle: shorter than the skull, normally about 40% of the total length of the head. The width is 2/3 of that of the skull.

Lips: the upper lip is pendulous, seen from the front, the upper and lower lips come together to form an inverted v. The inside of the lips are generally a dark colour.

Teeth: scissor or pincer-bite and may be slightly undershot.

Nose: wide, black pigmentation.

Eyes: slightly oval in shape, from medium to large in size. Set well apart, but neither sunken nor protruding. Eyelids are black and tight-fitting, never sagging. The colour varies from dark to medium brown, depending on the colour of the coat.

Ears: medium sized, set well apart, with short and fine hair. They fall naturally on each side of the head. If folded, they do so in the shape of a rose. They are set on slightly above eye level. Whilst ear cropping in victoria is a prohibited procedure, a dog should not be ruled out of being an RBD if its ears are cropped, as internationally it is common in this breed.

NECK

Shorter than the length of the head. Skin on the underside is loose, forming a slight dewlap. Solid and straight, it tends to be cylindrical and muscular.

FOREQUARTERS

Elbows: the distance from elbow to ground about half of the height at the withers for males and a little less for females.

Pasterns: very solid and slightly sloping.

BODY

Longer than the height at the withers, with a straight topline rising slightly from the withers to the croup. Hindquarters

Strong and parallel, without deviation.

FEET

Cat feet with rounded toes, not too close together.

TAIL

Thick base, tapering to the tip, down to the hock.

SKIN

Thick and elastic. Loose on and around the neck. When alert, the skin on the head forms symmetrical wrinkles which fan out from the furrow between the front lobes.

COAT

Short, coarse, flat with no undercoat (may have undercoat around neck and behind the thighs). Rather coarse to the touch.

COLOURS

All shades of brindle, or fawn to sandy. May have white marks on the chest, neck or throat, forefeet and toes of hind feet, and a black mask

HEIGHT AND WEIGHT

Height at the withers: 56 to 65 cm.

Weight: varies. Generally not less than 50 kg for males and 40 kg for females.

End of Part 5 – Perro De Presa Canario
